- Ideal for DBS Receivers, IF Filter
- Constant Group Delay
- Improved ESD capability by integrated shunt resistors

## SF480-2

[^0]Notes:

1. The frequency $f_{C}$ is defined as the midpoint between the 3 dB frequencies.
2. Unless noted otherwise, all measurements are made with the filter installed in the specified test fixture that is connected to a $50 \Omega$ test system with VSWR $\leq 1.2: 1$. The test fixture $L$ and $C$ are adjusted for minimum insertion loss at the filter center frequency, $f_{c}$. Note that insertion loss, bandwidth, and passband shape are dependent on the impedance matching component values and quality.
3. Unless noted otherwise, specifications apply over the entire specified operating temperature range.
